EDUCATION

Bachelor of Applied Science in Mechanical Engineering

May 2024

University of British Columbia

Vancouver, British Columbia

WORK EXPERIENCE

Product Manager (promoted from Associate Product Manager, Dec 2025)

May 2025 – Present

Critical Environment Technologies

Delta, British Columbia

- Built CET's first structured product prioritization system and roadmap using Jira Product Discovery, organizing 130+ feature ideas and 40+ bugs across all five CET product lines, killing 30 requests outright and cutting triage time from up to 3 months to ~1 week
- Conceived and led CET's transition from a white-labeled explosion-proof gas detector to an in-house design, using structured discovery across 20+ customer interviews in three segments and two industry conferences; cut unit cost from \$2,250 to \$650 and booked pre-launch orders equal to the prior year's entire white-label volume (\$175,000)
- Shipped a partner self-serve platform (project creation, quoting, ordering, order tracking) replacing a manual email-to-sales-order workflow, cutting partner order time from ~1 day to 5 minutes and freeing 6 hours/week of inside-sales capacity
- Introduced sprint planning for a six-engineer team, including commitment-accuracy and unplanned-work KPIs, raising commitment accuracy from ~31% to ~72% and lifting delivered throughput by 19% across 17 sprints
- Launched the industry's first gas detection system designer, automating BOM generation, system configurations, specification tables, and datasheet packages, cutting submittal creation time from ~30 minutes to seconds per system
- Set launch pricing with an NPV model weighing R&D and go-to-market investment against white-label run rates and competitor benchmarks, cutting customer price 40% while expanding unit margin from 38% to 70%

Application Engineer

August 2024 – April 2025

Critical Environment Technologies

Delta, British Columbia

- Delivered 1,700+ system quotations averaging ~1.5 hours in turnaround, 6x faster than the 1-day SLA target — while supporting 200+ technical calls and building deep expertise in customer pain points, application requirements, and cost-performance tradeoffs in gas detection system design
- Designed 100+ system layouts and wiring diagrams — including large, multi-zone installations — using AutoCAD and Revu, translating regulatory requirements and technical constraints into deployable, application-specific solutions

Online Community Manager

May 2022 – Aug 2022

Autonomy Network

Remote

- Generated \$10K+ in B2B and B2C revenue by building and executing targeted cold email and Twitter outreach campaigns, qualifying leads through discovery calls, and closing new client accounts

PROJECTS AND ACHIEVEMENTS

Product Manager and Lead Developer

January 2025 – April 2025

Amazon ShopSmart

Vancouver, British Columbia

- Led zero-to-one development of an AI-powered Amazon product comparison web app, conducting 50+ user surveys to define MVP scope and building a scoring algorithm that generates data-driven purchase recommendations

SKILLS

Core Competencies: Product Strategy, Impact/Effort Prioritization, Go-to-Market Strategy, Stakeholder Management, User Research, Agile Frameworks, Sprint Planning, Backlog Prioritization, Engineering KPI Design, Competitive Analysis, Market Segmentation, Pricing & Cost Modeling, 0-to-1 Product Development, AI Eval

PM & Collaboration Tools: Jira Product Discovery, Jira, Confluence, Figma, Lovable, MagicPatterns, Notion, HubSpot

Analytics: PowerBI, Microsoft Business Central (ERP), Google Analytics, Excel
